

Why are grown ups wearing  
Masks?

When I am at school or out at the shops I will see people wearing Protective equipment.

Protective equipment keeps people safe from germs.

People can wear masks, gloves, and aprons this is all protective equipment.

I might see children, adults, teachers wearing masks.

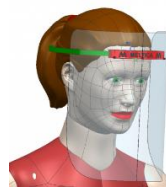

I will see some people in shops wearing masks,  
dentists and doctors wearing masks and adults in my  
family.

Some masks are made from material the same as a  
scarf or bandana.

Some masks are made of plastic called face shields.

Masks and face coverings keep people safe from

germs.

Germs come from coughs and sneezes.

I will get used to seeing more people wearing protective equipment.

People who wear masks or face coverings might be smiling at me and I can remember they are wearing protective equipment.

This keeps them safe from germs and that is a good thing.
